

# Reverse Array Elements !!

## Problem Statement

Liam is exploring array manipulation in programming. He wants to display the elements of an array in reverse order, starting from the last element and ending with the first.

Your task is to help Liam write a program that reads **N integers** into an array and prints all the elements of the array in **reverse order**.

## Input Format

- The first line contains an integer N, representing the number of elements in the array.
- The second line contains N space-separated integers, representing the elements of the array.

## Constraints

- $1 \leq N \leq 50$
- $-10000 \leq \text{Array\_Element} \leq 10000$

## Output Format

- Print the elements of the array in reverse order, separated by a single space.

## Sample Input 0

```
5
10 20 30 40 50
```

## Sample Output 0

```
50 40 30 20 10
```
