

Temperature conversion.

Problem Statement

Write a program to convert a temperature value from Degree Celsius ($^{\circ}\text{C}$) to Fahrenheit ($^{\circ}\text{F}$). The program should read a temperature in Celsius and calculate its equivalent value in Fahrenheit.

Input Format

- A single number (integer or float) representing the temperature in Celsius.

Output Format

- A single number (float) representing the temperature in Fahrenheit, up to 2 decimal places.

Sample Input 0

25

Sample Output 0

77.00
