

# Length conversion.

## Problem Statement

Write a program to convert a given length in centimeters (cm) into:

- Meters (m)
- Kilometers (km)

The program should take an input length in centimeters and calculate Meters and Kilometers.

## Input Format

- A single integer representing the length in centimeters.

## Output Format

- Display value of Meters and Kilometers in single line with space-separated.

## Sample Input 0

```
50000
```

## Sample Output 0

```
500.00 0.50
```
