

# Read and Display Elements of a 2D Array !!

## Problem Statement

Ethan is building a simple spreadsheet program. He needs to read the values into a **2D array** and display them in the same format as entered.

Your task is to write a program that reads a **2D array of integers** of size **R x C** and prints the elements row by row.

## Input Format

- The first line contains two integers R and C, representing the number of rows and columns of the array.
- The next R lines each contain C space-separated integers, representing the elements of the 2D array.

## Constraints

- $1 \leq N \leq 100$
- $-10^5 \leq \text{Array Element} \leq 10^5$

## Output Format

- Print the elements of the 2D array in a row-wise manner.
- Each row should be printed on a new line with elements separated by a space.

## Sample Input 0

```
2 3
1 2 3
4 5 6
```

## Sample Output 0

```
1 2 3
4 5 6
```
