

Count Digits in a Number.

Problem Statement

Neha is learning about numbers and wants to find out how many digits a given number contains.

Your task is to help her by writing a program that takes an integer **N** as input and prints the count of digits present in it.

Input Format

- A single integer N, representing the number.

Output Format

- Print a single integer, the count of digits in N.

Sample Input 0

```
1834
```

Sample Output 0

```
4
```
