Reverse a Number.

Problem Statement

Aryan is experimenting with numbers and wants to reverse the digits of a given integer. For example, if the number is **1234**, its reverse is **4321**.

Your task is to write a program that takes an integer **N** as input and prints its reverse.

Input Format

- A single integer **N**, representing the number.

Output Format

- Print a single integer, the reverse of **N**.

Sample Input 0

```
1634
```

Sample Output 0

```
4361
```
