Calculate simple interest.

Problem Statement

Write a program to calculate the Simple Interest (SI) for a given principal amount, rate of interest, and time.

Input Format

Three space-separated numbers:

- Principal amount P (integer)

- Rate of interest R (integer or float)

- Time period T (integer or float)

Output Format

- A single value representing the Simple Interest, up to 2 decimal places.

Sample Input 0

```
1000 5 2
```

Sample Output 0

```
100.00
```
