Palindrome Number Check!!

Problem Statement

Sanya is working with special numbers. A palindrome number is a number that remains the same when its digits are reversed. For example, 121 and 1331 are palindromes, while 123 is not.

Your task is to write a program that takes an integer N and checks whether it is a palindrome or not.

Input Format

- A single integer N, representing the number to be checked.

Output Format

- Print "Palindrome" if the number is a palindrome.

- Print "Not Palindrome" if the number is not a palindrome.

Sample Input 0

```
121
```

Sample Output 0

```
Palindrome
```
