Number to Words Converter !

Problem Statement

Jack is developing a voice-based banking application where numbers entered by users must be spoken in words.

Your task is to write a program that reads an integer from the user and prints its equivalent in words.

For example, if the user enters **123**, the output should be **One Two Three**.

Input Format

- A single integer **N**, representing the number.

Output Format

- Print the digits of N in words, separated by a single space.

- Each word should start with a capital letter.

Sample Input 0

```
405
```

Sample Output 0

```
Four Zero Five
```
